

Process for Picking Your Puppy:

I go by the date I receive your deposit (\$250) as to the order families pick their puppies. I set-up appointments for families to come and pick their puppy when the puppy is 7 weeks old, that way they can go home with you the same day!

They will have their first vaccination at 6 weeks of age and I also do 7 days of worming for both Coccidia and Albon. The first one is for mice because the moms love to eat them and pass the Coccidia through their milk. The Albon helps with Giardia which is because puppies eat puppy poo, I will have a puppy book with the dates the meds have been given to the puppy, which you need to take to the vet with you! They will also have their dew claws removed and they are all microchipped. There is a one year guarantee for genetic issues with eyes, hip, and heart.
